

A ready-made solution for your IDV needs:

IDENFO SECURE SCAN

Idenfo Secure Scan
IDENTITY VERIFICATION

WHAT'S INSIDE THE IDV SECURE SCAN?

IDV secure scan offers a comprehensive suite of features designed to make identity verification simple and secure:

Advanced Liveness Detection

Ensures that the person being verified is real and present, detecting subtle signs of life such as blinking and facial movements. This is perfect for remote onboarding, as it prevents spoofing attacks and ensures that only genuine users are onboarded.

Facial Comparison Technology

Works by comparing the live image of a person with the photo on their ID document. Using advanced algorithms, this feature confirms that the person presenting the ID is indeed the rightful owner, significantly reducing the risk of identity fraud.

Global Document Upload

Allows users to upload various types of identification documents, including national IDs, passports, and foreign resident visas. The system supports multiple formats and languages, making it versatile and convenient for users from different regions and backgrounds.

Advanced Anti-Fraud Validation

Employs sophisticated checks to verify the authenticity of uploaded documents. It analyzes security features like watermarks, fonts, and photo quality to ensure that only genuine documents are accepted, thus protecting your business from fraudulent activities.

Hologram Verification Technology

Adds an extra layer of security by scanning for holograms on ID cards. This common security feature is used to prevent counterfeiting, and our technology verifies that the hologram matches known patterns, confirming the physical integrity of the document.

OCR Integration

Utilizes Optical Character Recognition technology to extract text from images of documents. This feature automates data entry, reducing manual errors and speeding up the verification process.

TESTED WITHOUT PREJUDICE

IDV Secure Scan is designed to recognise and validate IDs from a diverse range of cultural backgrounds.

Customise your SDK

We understand that every business is unique. That's why our SDK is customizable to meet your specific requirements, offering you flexibility and control.

Need an API instead?

Not ready for the full SDK? No problem! Some of our core features; Facial Comparison, Global Document Upload, Anti-Fraud validation and OCR Integration are also available through our API. Choose what works best for you!
